

Africa Regional TB summit

4-6 March, 2019 | Kigali, Rwanda

Theme: *It's time for Africa to step up efforts to find all missing people with TB*

Community-based monitoring for social accountability Pilot

Maxime Lunga, Club des Amis Damien, DR Congo

Step up Efforts to Find All People with TB, Kigali, Rwanda, 04 March 2019

Problem Statement

1. **No systematic data collection of human rights related barriers** that TB patients experience when accessing TB services at a primary health care level.
 - Uninformed planning that does not respond to patient specific needs (patient centered care).
 - Difficulties in evaluating services due to absence of data.
 - Difficulties in justifying a multi-sectoral approach and linkages to different services that support TB patients.

2. **Unavailable real time (timely) data** on patient care, surveillance and monitoring of TB services and the programmatic management of TB.
 - Late (untimely) responses that address the barriers to access (e.g. drug stock outs, which can lead to treatment interruptions and death)

Intervention: Community-based monitoring

Engaging TB patients and the affected communities to report the barriers they experience, to strengthen the TB M&E system, improve the responsiveness, equity and quality of TB services and hold TB service providers to account. (Global Fund)

01 END TB STRATEGY

- Strong coalitions with **civil society and community** organizations
- Protection and promotion of **human rights**, ethics and equity
- Patient Centered Care

02 GLOBAL PLAN TO END TB

- **Community and people centered** approaches
- **Human Rights and Gender Based** Approaches

03 INVESTING TO END EPIDEMICS

- Promote and Protect Human Rights and Gender Equality

04 TB & Human Rights

- Person and affected communities placed at the center as equal partners

End TB Strategy

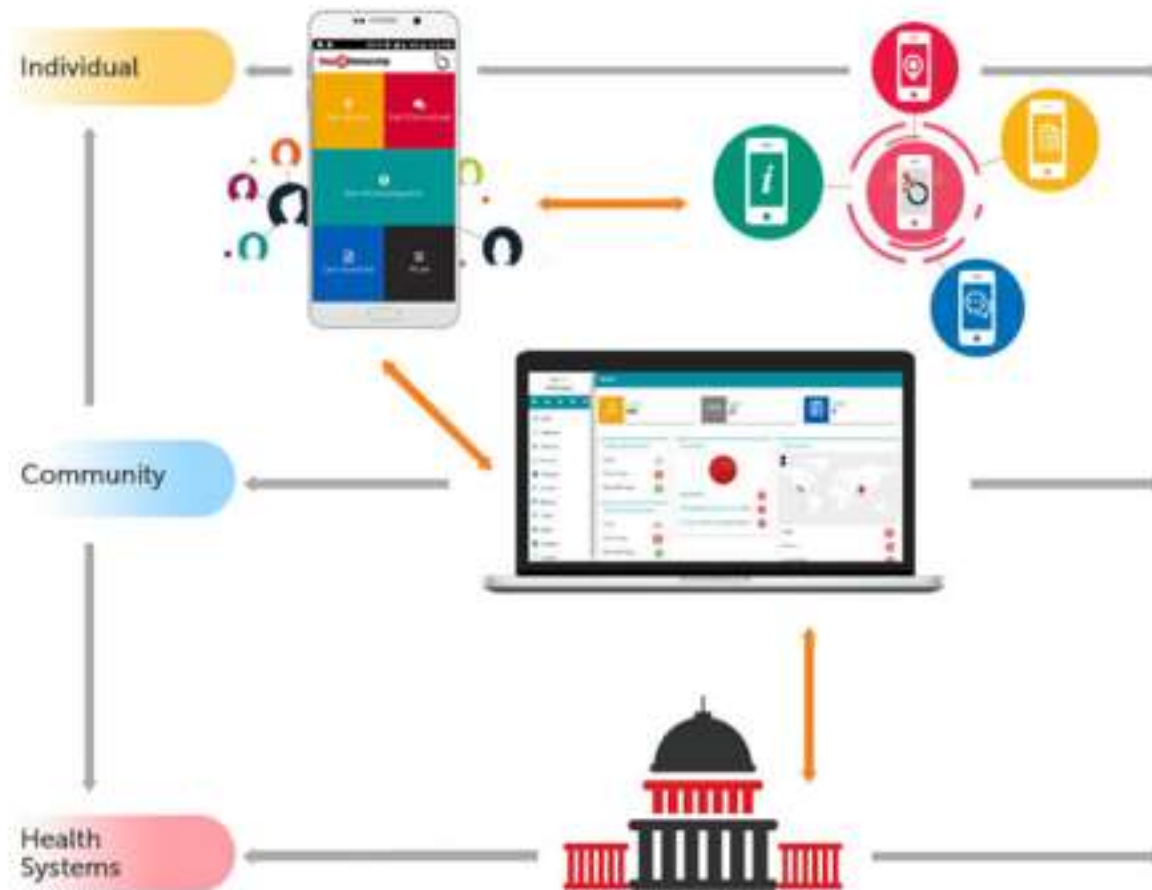

Global Plan to End TB

Investing to End Epidemics

TB & Human Rights Briefing Note

Alignment

Intervention Objectives

Patient Care

OneImpact : Enhancing people centered approaches to TB

- Designed by and around the needs of people affected by TB. OneImpact empowers people and communities affected by TB with knowledge, with ways to connect with peers and services and ways to report problems
- Informed and empowered communities will create demand for TB services

Monitoring, Surveillance, Advocacy

OneImpact : Advancing community-driven responses in TB

- OneImpact strengthens community data and management systems
- Information generated can lead to shorter feedback loops and quicker community responses

Surveillance & Programmatic Management

- Evidence generated is used to take corrective action to improve TB policies programmes, and services

Innovation and Strategies

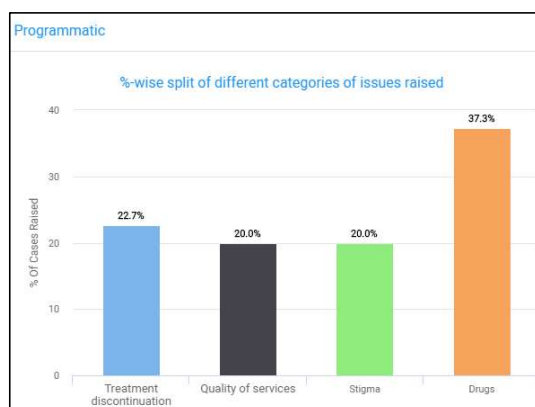

Innovation

Digital solutions

1. Patient Free App
2. Community Health Worker Dashboard
3. Accountability Dashboard

APP

Accountability Dashboard

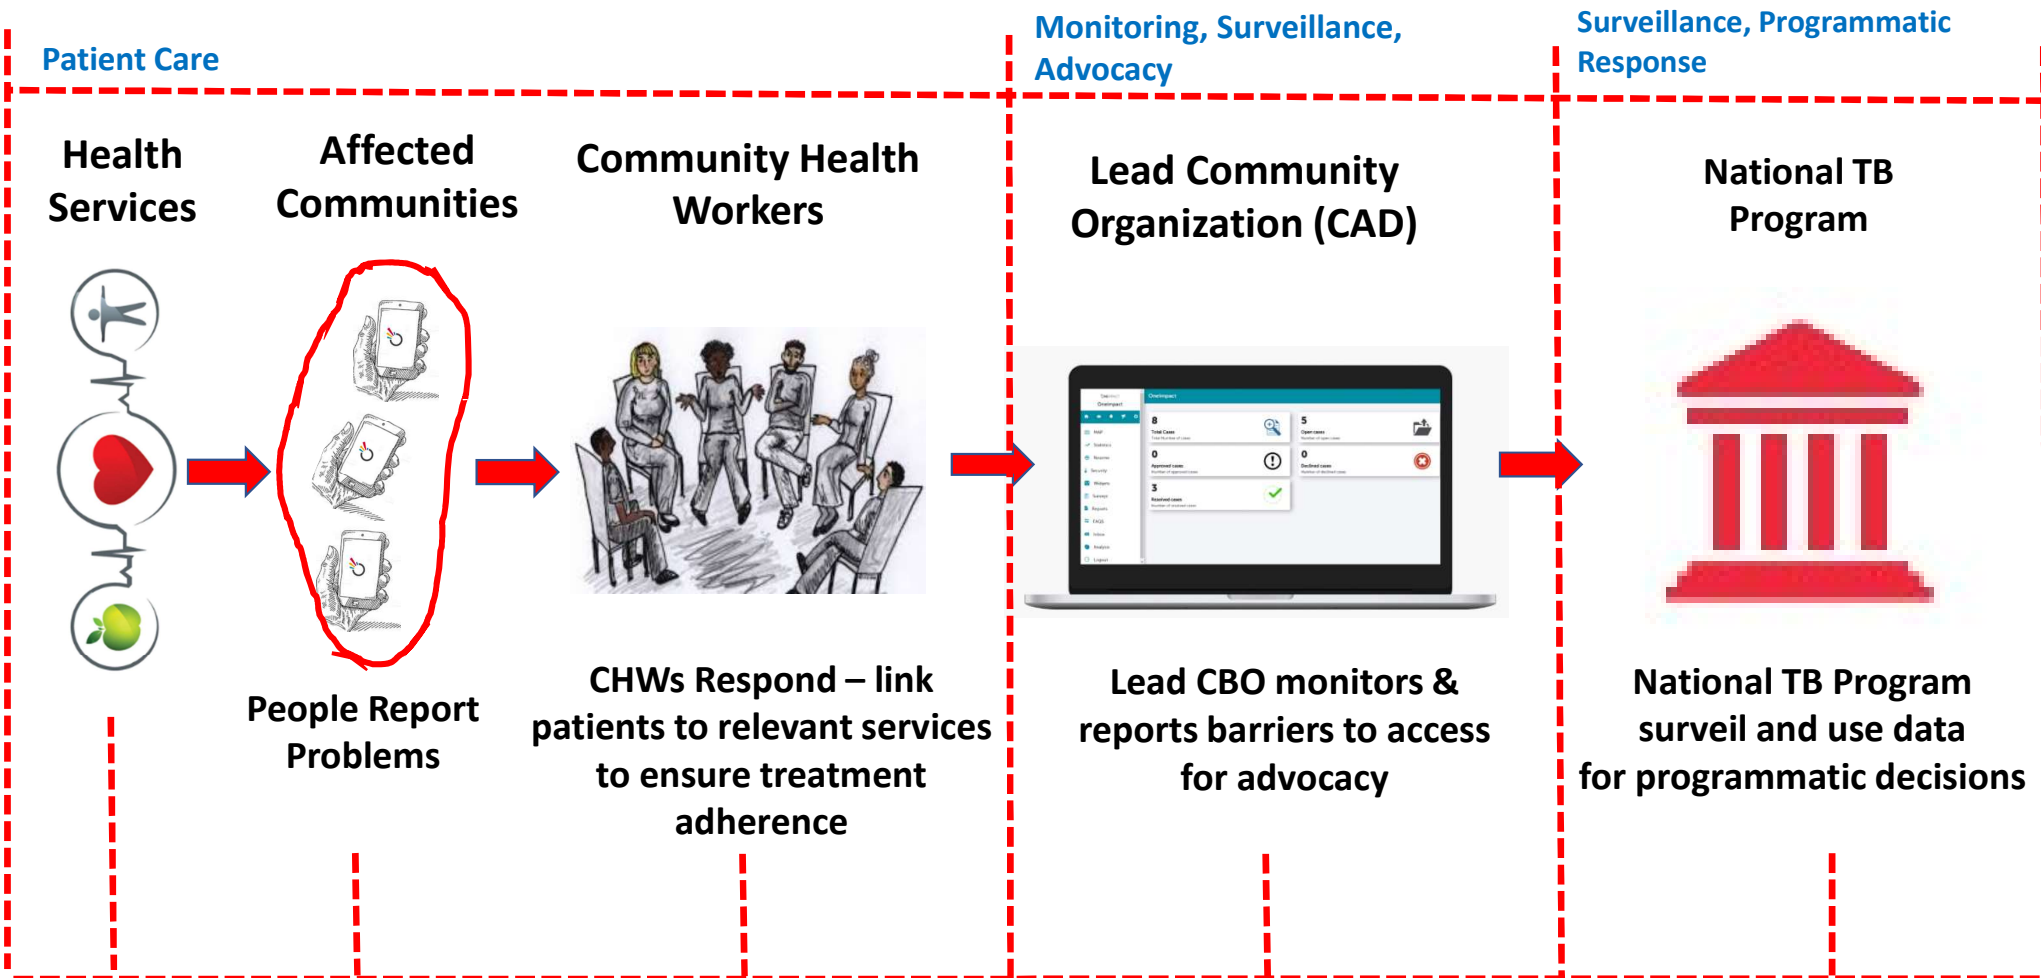

CHW Dashboard

Strategies

- **Community-led advocacy to obtain buy-in from NTP and other strategic partners**
 - Endorsing, approving and supporting the **pilot** and **scale-up** of intervention (Global Fund, USAID, WHO, CORDAID, Global EGPAF, Stop TB DRC, UCOP+, LNAC, Fondation Femme Plus)
- **Generation of strategic information to inform human rights and gender responses to TB**
- **Implementation science approach – learning as we go**

Accountability Framework

Implementation Science, Implementation Phases*

***Follows the WHO Handbook on Digital Technologies for TB
Aligns with End TB Strategy, Global Plan to End TB, TB and Human Rights, National Strategic Plan**

Implementation site

Pilot

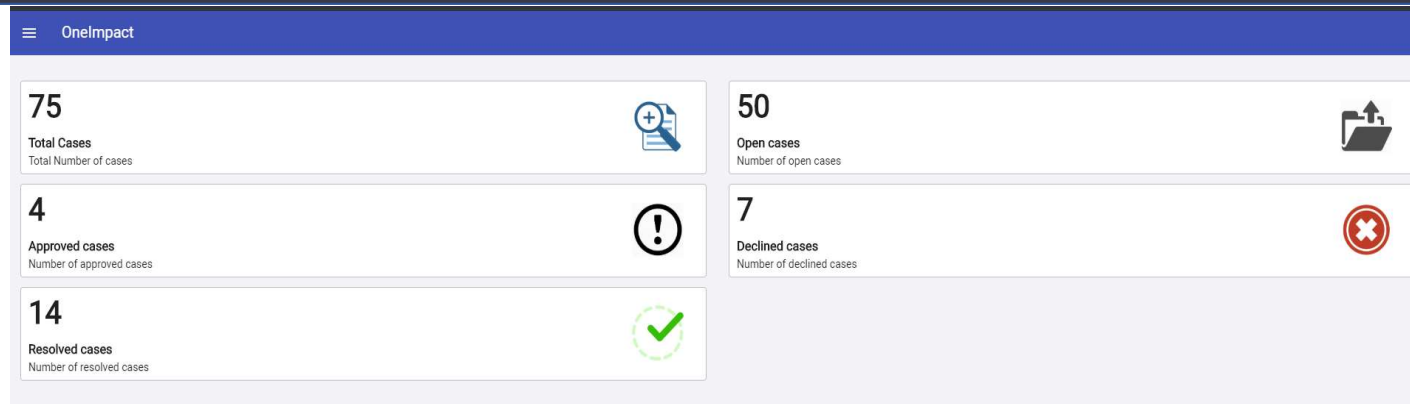

- Kinshasa
- 30 TB Health Centres (Staff)
- 300 TB Patients
- 60 Trained CHWs
- CAD (10 people)
- NTP

Targets

- Usability (patient care)
 - 100% active App users
 - 85% of active App users satisfied with the App
- Efficiency (patient care)
 - 85% community response implemented within 72 hours
- Programmatic (monitoring, surveillance, advocacy)
 - 1 report / month with information on drug stock outs, stigma, accessibility and quality of services submitted to NTP
- M&E
 - Report on feasibility of using the App, its usability, acceptability, scalability and any resulting social change documented.

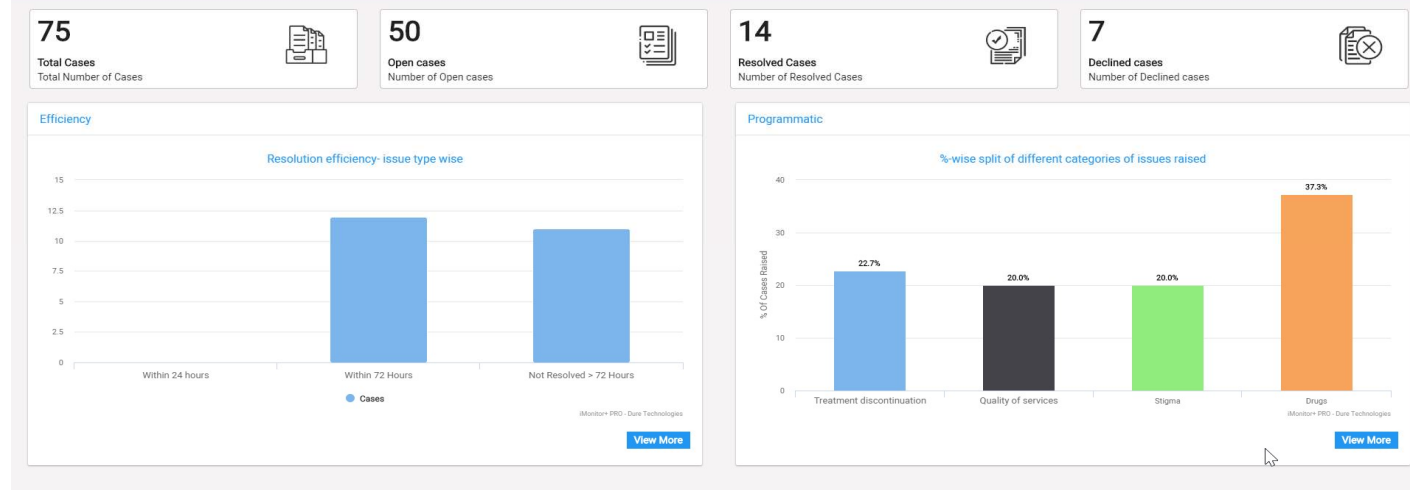

Dashboard Homepage

- ❑ Summarized view of progress of issues raised
- ❑ Gives break up of Open, Closed and Resolved Cases

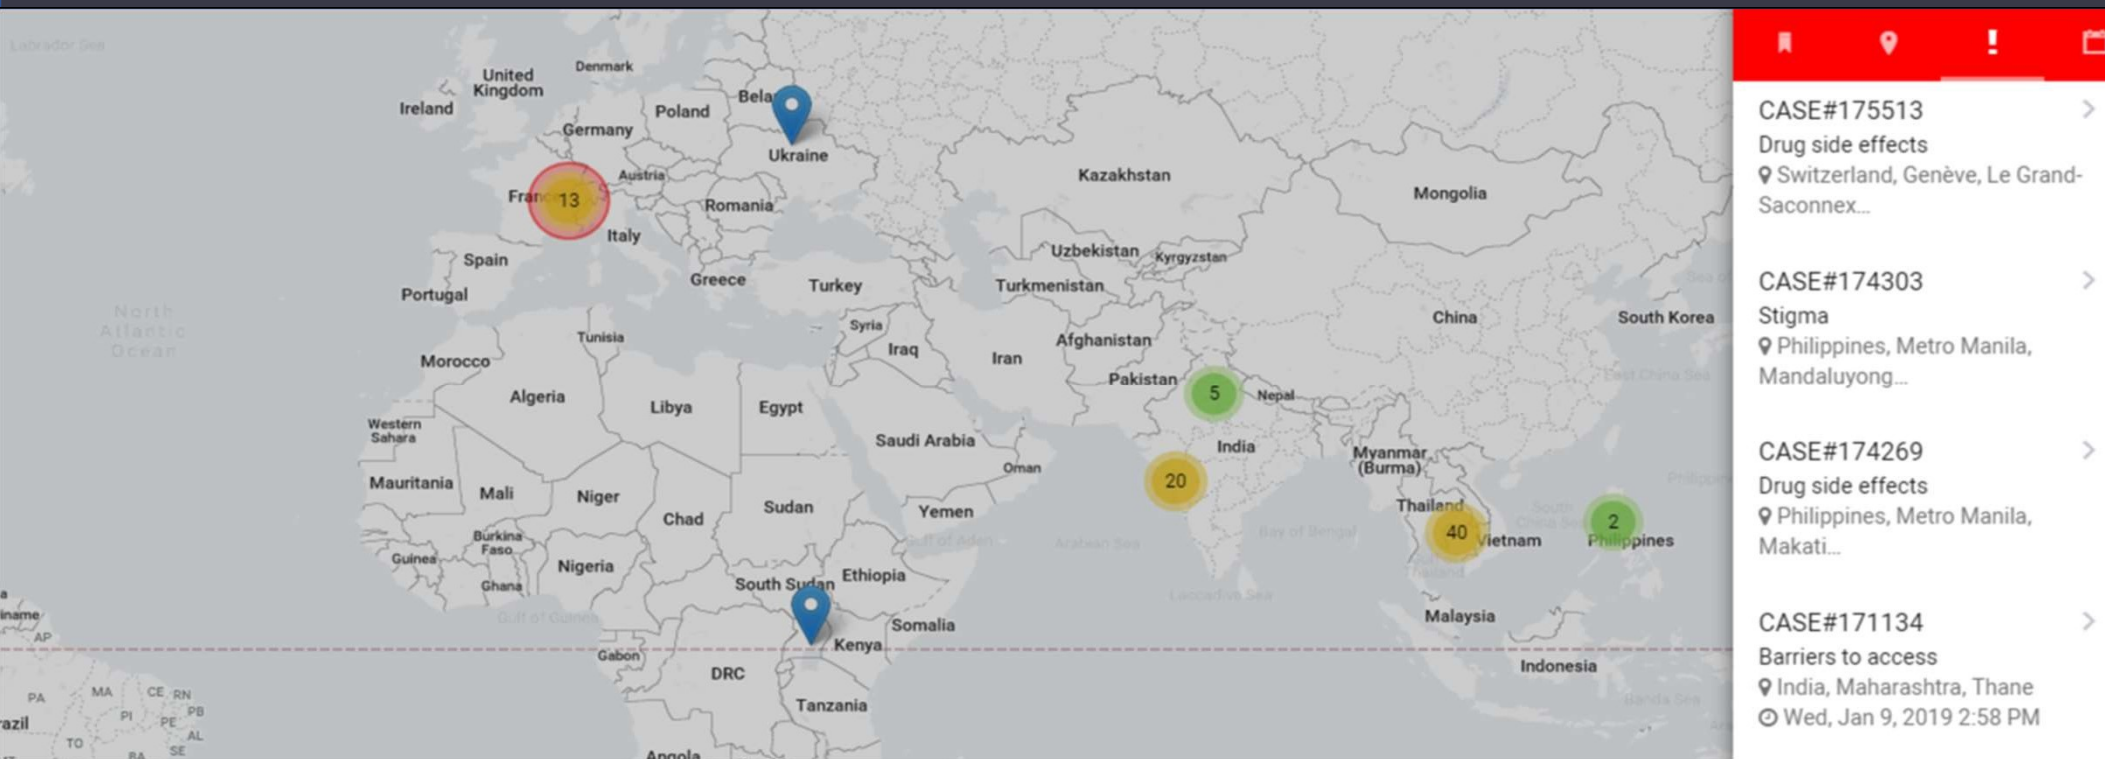

Indicators Overview

- ❑ Efficiency indicators
 - ❑ Focus on issue resolution time
- ❑ Programmatic indicators
 - ❑ Focus on Issues Raised by Type
 - ❑ Break of Issues with Type, sub-type

Map View

- Geo-Located Map view to review areas from where cases have been created
- Easy method to plan for intervention based on areas from cases created

Best practices, Lessons Learnt, Next Steps

Best practice

- **Patient driven** (principle) – what is monitored is decided by affected communities
- **Alignment with NTP Policy Guidelines** (Get Knowledgeable)
- **Integration** into existing CHW model
- **Multisectoral approach** to increase feasibility of scale up and use of data, and technical assistance
- **Multi disciplinary** team for TA on issues of confidentiality, data quality, integration into different technology platforms
- **Country owned data**

Lesson learnt

- It can be **adapted** to local settings to meet patient needs
- Information from **CRG reports** can inform the adaptation process (Get Involved)
- **Flexibility**; Pilot uses an assisted model due to limited cell phone coverage

Next Steps

- Gradual Scale-up
 - 5 priorities provinces (MDR-TB and TB/HIV co-infection)
 - Other 15 provinces.
